

Dear Purchase-Team,

We are a jung startup from Austria, founded in 2017 by three friends who studied mechanical engineering and all of us are totally into motorbikes.

We've developed a patented license plate holder which allows to mount & remove the license plate within seconds, without the use of any tools and nevertheless the plate can't be lost, even on rally's or enduro -races.

This is especially interesting when you leave the road and go into rough terrain, as its common to damage the plate there. Also, for interchangeable license plates, the HotSwop system is the perfect solution.

ENDURO-AUSTRIA says: "The HotSowp system is a high-quality license plate holder and assuredly the most practicable and reliable system on the market"

Currently we've more than 50 distributors and we're shipping our products to 22 countries. We're looking for a wholesaler so we can focus even more on the developing products. It would be a very special honor for us to have our products in your portfolio.

We would be very pleased to receive any respond from you.

Best regards from Austria,

Johannes Baurenhas

CTO

# HotSwop PRO

## Target customers:

- 1 - Enduro and Supermoto Riders -> to protect their license plate from damage.
- 2 - Riders with interchangeable license plates -> e.g. Austria, Switzerland, Germany
- 3 - Social Media "Influencers" -> to keep their privacy private on pictures and media.

## Customer benefits:

- Switch, add or remove license plates safely without the need of any tools.
- Switch plates within seconds,
- Free of any maintenance and self-cleaning high-end system.
- HotSwop is a "painkiller" - product

## Uniqueness:

- Memory-plastic guarantees total vibration suppression.
- When experiencing impacts bigger 250kg, the plate part can detach (for safety purpose) without plastic deformation, which means the system is "unbreakable"
- Most innovative solution on the market, patented tech. features -> see on packaging.
- HotSwop ensures highest quality standards
- Laboratory tested and examined by assessor
- and many more
